BC PRODUCTS BULLBAR – Navara NP300 FACELIFT (12/2020 – current)

BC Products bull bars are a proven necessity for travel in the city or the outback, offering top level protection for vital mechanical components against collisions with animals and other unforeseen obstacles. They also serve as a rock solid platform for fitting additional accessories such as driving lights, light bars, winches, and UHF aerials. Importantly, these bull bars are compliant - ADR approved and airbag compatible, ensuring that the installation does not compromise the vehicle's safety features.

Designed, developed, and prototyped in Australia by BC Products, these bull bars are engineered with a focus to maintain optimal functionality, particularly important given the incorporation of modern technology and safety sensors in vehicles.

Best of all these bars are a direct fit, full bumper replacement giving them an elegant appearance. Designed and built for strength useability and visual appeal.
